

Assistive Technology and Augmentative Communication

Augmentative/Alternative Communication is for patients who have been diagnosed with a neurological condition and have difficulty communicating verbally. This specialized outpatient rehabilitation uses technology to support, enhance and supplement communication for individuals who are not independent verbal communicators in all situations.

COMMON DIAGNOSES:

- Progressive neurological diseases (ALS, Parkinson's and other neuromuscular conditions)
- Late effects of CVA (Stroke)
- Late effects of traumatic brain injury

PROGRAM FEATURES/REQUIREMENTS:

- By physician order only (Must have a prescription for: Augmentative/Alternative Communication evaluation with SLP and Assistive Technology evaluation with OT)
- Must have family and/or caregiver support
- Initial evaluations are approximately 1.5 hours and scheduled by appointment
- Evaluation is performed by a speech-language pathologist with assistance from an occupational therapist as needed; durable medical equipment vendor(s) is/are also present for evaluation
